FOR YOUR EMAIL
INFRASTRUCTURE.

IronPort C10 for Small and Medium Businesses

OVERVIEW

Today, companies rely on email more than the telephone to conduct daily business. With growing security threats such as spam and viruses, it is imperative that businesses of all sizes protect their email infrastructures. The *IronPort C10™* is a reliable, affordable, and easy to use all-in-one appliance—purpose-

built for email security. Designed to meet the needs of small and medium businesses and satellite offices, the *IronPort C10* is built on the same robust platform that protects the email infrastructures of major Global 2000 companies.

“The IronPort C10 email security appliance is built on the same robust platform that powers and protects the most demanding networks in the world.”

FEATURES

The *IronPort C10* provides the most robust perimeter protection—while lowering the cost of maintaining a reliable, secure email infrastructure—to ensure high availability of mission critical mail.

SPAM PROTECTION

IronPort Reputation Filters™ provide an outer layer of defense utilizing *IronPort SenderBase®* data to perform a real-time email traffic threat assessment and identify suspicious email senders.

IronPort Anti-Spam™ Filters combine best-of-breed conventional techniques with IronPort’s breakthrough context-sensitive detection technology, to eliminate the broadest range of known and emerging email threats.

VIRUS PROTECTION

IronPort Virus Outbreak Filters™ stop viruses before they even enter your network by identifying and quarantining suspicious email—hours before traditional virus signatures are available.

Sophos Anti-Virus technology provides a fully integrated second layer of virus protection with the highest performance virus scanning technology in the industry.

POWERFUL AND EASY TO USE MANAGEMENT TOOLS

Intuitive GUI enables unprecedented visibility and control. The integrated Web-based user interface enables real-time and historical reporting along with the ability to configure policies, search, and selectively release quarantined messages.

FEATURES (CONTINUED)

Email Security Manager™ is a powerful, graphical management tool that yields fingertip control to manage all email security, including preventive and reactive anti-spam and anti-virus filters, email encryption, and content filtering.

Mail Flow Central™ allows you to find the status of any message that has traversed your infrastructure. With this centralized reporting tool, administrators and support staff can quickly answer end-user inquiries such as, “What happened to my email?”.

Mail Flow Monitor™ delivers complete, real-time visibility into who is sending you email, and alerts administrators to suspicious traffic—allowing them to take immediate action.

The IronPort Spam Quarantine™ is a self-service end-user solution, with an easy to use Web or email-based interface. This feature provides end-users with their own safe holding area for spam messages and integrates seamlessly with existing directory and mail systems.

HIGH PERFORMANCE CONTENT SCANNING ENGINE

Content Scanning technology enables enforcement of regulatory and acceptable use policies, based on the content of messages. Turnkey HIPAA, SOX, and GLB solutions are also available with this feature.

Compliance Quarantine provides delegated access to emails that have been flagged by the content scanning engine.

IRONPORT MTA PLATFORM

AsyncOS™, IronPort’s proprietary operating system, was built from the ground up to address the requirements of modern email gateways and to position customers for the future of SMTP. This high performance future-proof platform ensures that your email infrastructure is never overwhelmed, even during the largest outbreaks or attacks.

BENEFITS

Affordable The *IronPort C10* is designed and built not only for power and ease of use, but also for affordability. This innovative technology provides a comprehensive solution to ensure the availability and security of your email infrastructure—implemented in a manner that makes it cost-effective for companies of all sizes.

Reduced Administrative Burden The *IronPort C10* uses the industry’s most advanced technology to deal with threats and anomalies in a fully automated manner. This allows highly skilled IT staff to focus on other problems and leave the email issues to IronPort®.

Increased End-User Productivity By securing the network at the gateway level, the *IronPort C10* acts as a “shock absorber,” in front of the groupware server(s). This ensures that end-users are not bogged down

by spam, viruses and other threats. Unlike other solutions, IronPort security services do not rely on end-users to “train” the system. Instead, high accuracy is maintained through continuous and automatic rule updates.

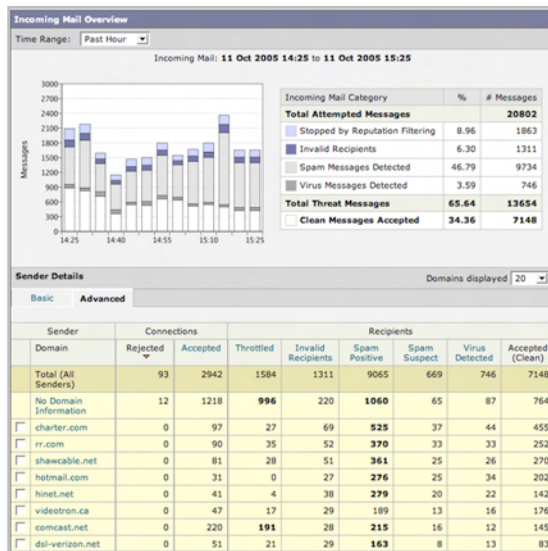

Lower TCO The *IronPort MTA* platform enables massive reduction in Total Cost of Ownership (TCO) by consolidating email operations and security into a single platform. Self-managing security services provide the lowest maintenance solution in the industry with minimal configuration requirements.

Scalable Due to the unique design of the *IronPort C10* core architecture, the solution is robust enough to support growing companies. The *IronPort C10* scales as the size of your organization increases. Multiple *IronPort C10* appliances can also be clustered for automatic scalability, redundancy and fault tolerance.

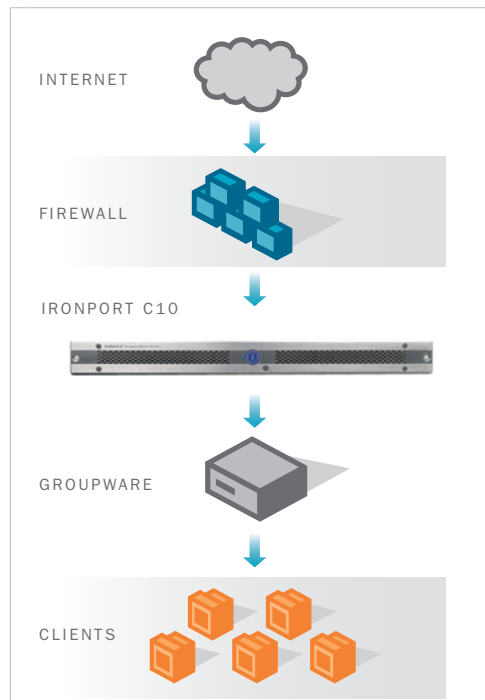

BENEFITS
(CONTINUED)

Every *IronPort C10* utilizes *IronPort Mail Flow Monitor*. *Mail Flow Monitor* yields a complete real-time view of all inbound and outbound email within a company, providing unprecedented security insight.

The *IronPort C10* integrates easily into existing messaging infrastructures — delivering defense-in-depth security with carrier-proven technology and the management capabilities required by large enterprises and ISPs.

Unprecedented Insight The *IronPort C10* offers very sophisticated management, monitoring and reporting tools. Each appliance has a unique reporting system, providing both a real-time and historical look at mail flowing through your email infrastructure. IronPort provides system administrators with the necessary information to make critical security decisions.

Improved Network Efficiency IronPort’s *Reputation Filtering System* was the first in the industry and remains the most sophisticated. In its default settings, it will block over 80 percent of incoming mail at the connection level, saving bandwidth (the message is never accepted) and system resources. CPU intensive spam and virus filters are only used when needed, and rate limiting is a very effective defense against “hit and run” spam attacks or denial of service attacks.

SPECS

CHASSIS / PROCESSOR

Form Factor	17" 1U rack mounted chassis
Dimensions	1.7" (h) x 17" (w) x 22" (d)
CPU	Single Intel Processor

STORAGE

RAID	RAID 1 configuration
Drives	Two 40GB 7200 RPM SATA drives

CONNECTIVITY

Ethernet	Two Embedded Intel Gigabit NICs
Serial	1 DB-9 Serial Port

MAIL OPERATIONS

Mail Injection Protocols	SMTP, ESMTP, Secure SMTP over TLS
Mail Delivery Protocols	SMTP, ESMTP, Secure SMTP over TLS
DNS	Internal resolver/cache; Can resolve using local DNS or Internet DNS servers

INTERFACES/CONFIGURATION

Web Interface	Accessible by HTTP or HTTPS
Command Line Interface	Accessible via SSH or Telnet; Configuration Wizards
File Transfer	SCP or FTP
Programmatic Monitoring	XML-based configuration files

PRODUCT LINE

SIZING UP YOUR EMAIL SECURITY SOLUTION

IronPort Systems provides industry leading email security products for organizations ranging from small businesses to the Global 2000.

IronPort X1000	Designed to meet the needs of the most demanding networks in the world.
IronPort C600	Suggested for organizations with more than 5000 email users.
IronPort C300	For medium-sized enterprises and organizations with 1000 to 5000 email users.
IronPort C300D	For any company with unique outbound email communication needs.
IronPort C10	An affordable, and easy to use all-in-one appliance for organizations with up to 1000 email users.

SUMMARY

INDUSTRIAL STRENGTH EMAIL SECURITY

The IronPort email security appliance is the most sophisticated system available today. In production at eight of the ten largest ISPs and more than 20 percent of the world's largest enterprises, this system has a demonstrated record of unparalleled security and reliability.

This same code base that powers IronPort's most sophisticated customers is also available in an easy to use 1U appliance—the *Ironport C10*. By reducing the downtime

associated with spam, viruses and a wide variety of other threats, the *IronPort C10* enables the administration of corporate mail systems, reduces the burden on technical staff, and quickly pays for itself. It is the advanced technology within the IronPort appliances that leads to the simplicity of management, and also the highest levels of security in the world. IronPort's email security appliances support and protect your email systems—not only from today's threats, but from those certain to evolve in the future.
